

Supervised Learning / Deep Learning

Deep Learning Extension

The examples that follow in this lesson use the Deep Learning Extension. Before continuing to the additional pages. Please make sure that the extension is installed. The examples we use in the RapidMiner Academy are small and should not require a GPU setup. The default installation is good enough for our purposes.

For an overview of the installation, please read the current documents here:

INSTRUCTIONS

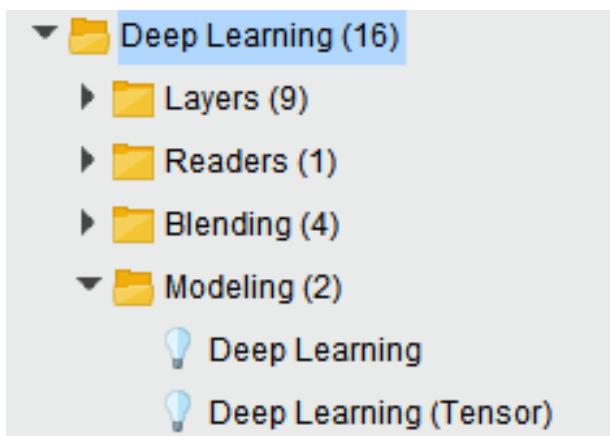

The Deep Learning extension is available here:

<https://marketplace.rapidminer...>

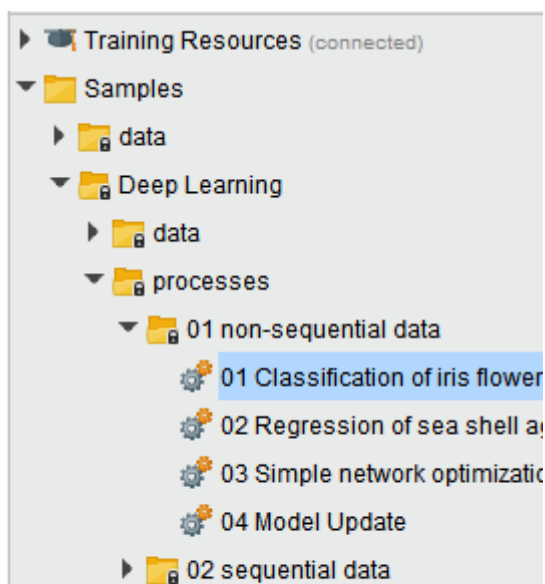

The Deep Learning Extension requires the ND4J extension, here:

<https://marketplace.rapidminer...>

After installing the extension, you should have the operators available within Extensions in your operator panel

You should also have Deep Learning Samples available:

- ▶ 03 import models
- ▶ results

Is the extension installed and configured? Then continue for some examples!
